A list of the top 10 ways to use an iPhone Barometer for your Barometer app. Opinion: Should College Textbooks Be Free? The debate over whether college textbooks should be free has long raged on both sides. For those that disagree with making textbooks free, the argument is that there are other sources available that extend beyond what can be found in printed texts. Meanwhile, those who support eliminating textbook costs often feel like textbooks are outdated and there is little practical value in paying for them when they can easily be found online or downloaded free of charge. This argument continues as there are those who sincerely believe that college textbooks should be cheap and free. They argue that college students should not be burdened with the expenses of printing, shipping, and publishing costs for textbooks. To them, it is unfair to ask a student to pay a fee for a book which only exists digitally through an online source or at a campus vendor. In other words, it represents a double taxation which the student simply cannot afford. In opposition to this argument is the belief that there are other sources available from which textbooks can be acquired for free or at a little cost to the student. It is argued that if these sources are widely known and available, why not make use of them instead of the antiquated traditional route. To many, this represents a way to make textbooks more accessible and less costly to students who may not be able to afford them otherwise. Is free money enough? Does the government think it is? Do we all get an equal hand of cards? These are difficult questions and arguments that we will discuss below. How education policy affects tuition costs — these two articles discuss how higher education costs affect student debt and student loan debt. The article, "Toward a Universal Free Higher Education" explores the potential for a free tuition system. It states that, "In this way, a universal free higher education system might create a perfect storm of productivity and equality of opportunity." These articles review the story of a group of young men who were convicted for armed robbery at college. This story is particularly interesting because it gives us a glimpse into the lives of students who are forced to make tough decisions about their future, choices that impact their families as well as themselves. In other words, these articles tell us not only how society looks at college but also how law enforcement views your time there. In "The Last Lecture", Randy Pausch writes about his last lecture as an expert speaker. He writes about his childhood, his wife, and the lessons he learned through life. The article "Freeing the University" talks about how professors can benefit from sharing their knowledge with others. This is done by sharing their work without making any profit off of it. Professors should be able to share their knowledge with everyone so that students can succeed in their future careers. This is why professors should never limit access to information because it might be used for something bad. Instead, they should freely give out information so that people can appreciate what can be done with it. With the switch to digital textbooks, there are still costs associated with textbooks.
