

# Faceclin Gel

**Faceclin Gel** is a topical medication used primarily for treating acne (pimples). It is a combination of two active ingredients that work together to combat acne and reduce skin inflammation. Here's detailed information about it:

## Composition

1. **Clindamycin (1%):**

An antibiotic that helps to stop the growth of bacteria that cause acne.

2. **Nicotinamide (4%):**

A form of Vitamin B3 that has anti-inflammatory properties, helping to reduce redness, swelling, and the appearance of acne.

## Uses

- Treatment of mild to moderate acne (pimples).
- Reducing acne-related redness, swelling, and scarring.
- Preventing the growth of acne-causing bacteria.

## How It Works

- **Clindamycin** inhibits bacterial protein synthesis, effectively reducing bacterial proliferation in acne lesions.
- **Nicotinamide** reduces sebum production and inflammation, improving skin texture and reducing redness.

## How to Use

1. Wash your face with a gentle cleanser and pat dry.
2. Apply a thin layer of Faceclin Gel directly to the affected areas of the skin once or twice a day (as directed by your doctor).
3. Avoid applying on broken or irritated skin.
4. Wash your hands after applying.

## Side Effects

Common side effects are usually mild and include:

- Skin irritation or redness.
- Dryness or peeling of the skin.
- Itching or burning sensation at the application site.

If severe side effects occur (e.g., severe rash, swelling, or allergic reactions), stop using the gel and consult your doctor.

## Precautions

- Avoid contact with eyes, mouth, or inside the nose.
- Do not apply on cuts, wounds, or sunburnt skin.
- Use sunscreen during the day, as acne medications can increase sensitivity to sunlight.
- Avoid using other acne products (especially those containing benzoyl peroxide or salicylic acid) unless advised by a doctor.

## Storage

- Store in a cool, dry place away from direct sunlight.
- Keep out of reach of children.

## **General Advice**

- Consistent use is key for best results, but improvement may take a few weeks.
- Do not use it without a doctor's recommendation if pregnant, breastfeeding, or allergic to its ingredients.
